

Aim

To design a simple Android application using layouts and implement navigation between two activities using a button.

Procedure

1. Open Android Studio.
 - . Create a new project (Empty Activity, Kotlin).
2. Design the first screen (activity_main.xml) with:
 - . o A TextView
3. o A Button
4. Create a second activity:
 - o Right-click package → New → Activity → Empty Activity
 - o Name it SecondActivity
5. Design the second screen (activity_second.xml) with a TextView.
 - . In MainActivity.kt:
6. o Add button click listener
 - . o Use Intent to move to SecondActivity
7. Run the app.
 - . Click button → Navigate to second screen.

Code

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
```

```
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:gravity="center"
    android:orientation="vertical">
```

```
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="Welcome to Layouts Ex-5"
    android:textSize="20sp"/>
```

```
<Button
    android:id="@+id/btnNext"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
```

```
        android:text="Go to Second Activity"/>
    </LinearLayout>
```

MainActivity.kt

```
package com.example.layouts

import android.content.Intent
import android.os.Bundle
import android.widget.Button
import androidx.appcompat.app.AppCompatActivity

class MainActivity : AppCompatActivity() {

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)

        val btn = findViewById<Button>(R.id.btnNext)

        btn.setOnClickListener {
            val intent = Intent(this, SecondActivity::class.java)
            startActivity(intent)
        }
    }
}
```

activity_second.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:gravity="center"
    android:orientation="vertical">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="This is the Second Activity"
        android:textSize="20sp"/>
</LinearLayout>
```

SecondActivity.kt

```
package com.example.layouts
```

```
import android.os.Bundle
```

```
import androidx.appcompat.app.AppCompatActivity
```

```
class SecondActivity : AppCompatActivity() {  
  
    override fun onCreate(savedInstanceState: Bundle?) {  
        super.onCreate(savedInstanceState)  
        setContentView(R.layout.activity_second)  
    }  
}
```

Result

The application successfully:

- Displays the first screen with a button
- Navigates to the second screen on button click
- Shows:

This is the Second Activity
